the physical and chemical properties of food products have central roles in biotechnology and the pharmaceutical and food industries understanding these properties is essential for engineers and scientists to tackle the numerous issues in food processing including preservation storage distribution and consumption this book discusses models to predict some of the physical chemical properties pH and ionic strength for biological media containing various solutes in recent years food production has involved less processing and fewer additives or preservatives if health benefits for consumers are obvious it is not only necessary to adapt current processing and preservation processes but also to verify

that appropriate technological and health properties are preserved the authors present established models but also introduce new tools for prediction with modeling methods that are part of a more general approach to understand the behavior of fluid mixtures and design new products or processes through numerical simulation describes the construction of a tool to allow you to predict the physical chemical properties of foods and bacterial broths shows you how to apply this tool with complex medias to predict water activity and ph levels and how to integrate this tool with a process simulator full with theoretical equations and examples to help you apply the content to your data

nonthermal processing technologies for food offers a comprehensive review of nonthermal processing technologies that are commercial emerging or over the horizon in addition to the broad coverage leading experts in each technology serve as chapter authors to provide depth of coverage technologies covered include physical processes such as high pressure processing hpp electromagnetic processes such as pulsed electric field pef irradiation and uv treatment other nonthermal processes such as ozone and chlorine dioxide gas phase treatment and combination processes of special interest are chapters that focus on the pathway to commercialization for selected emerging technologies where a pathway exists or is clearly identified these chapters provide examples and case studies of how new and nonthermal processing technologies may be commercialized overall the book provides systematic knowledge to industrial readers with numerous examples of process design to serve as a reference book researchers professors and upper level students will also find the book a valuable text on the subject
